Project Initialization and Planning Phase

Date	15 July 2026
Team ID	
Project Title	The Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed project aims to predict the Human Development Index (HDI) using machine learning techniques. It analyzes key socio-economic indicators to provide quick and accurate HDI predictions, supporting research and decision-making.

Project Overview	
Objective	Develop a machine learning model to accurately predict the Human Development Index using socio-economic indicators.
Scope	The system predicts HDI values based on input features, enabling faster analysis and informed decision-making.
Problem Statement	
Description	Manual analysis of Human Development Index is time-consuming and depends on multiple socio-economic factors, making prediction difficult.
Impact	An automated prediction system improves efficiency, supports better planning, and reduces manual effort.
Proposed Solution	
Approach	Use machine learning algorithms to analyze HDI-related indicators and generate accurate predictions.
Key Features	- Machine learning-based HDI prediction. - Fast and accurate results. - User-friendly web interface. - Data visualization and analysis.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Intel i5/Ryzen 5 or above
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	256 GB SSD
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib.
Development Environment	IDE	Jupyter Notebook, VS Code
Data		
Data	Source, size, format	Kaggle HDI Dataset, CSV.
