Empathy Map

This empathy map represents the perspective of a user who wants to evaluate and predict a country's Human Development Index (HDI). It helps understand the user's needs, concerns, actions, and emotions so that the machine learning system can provide accurate and meaningful HDI predictions.

SAYS • I want to know a country's HDI. • I need an accurate prediction • I want an easy-to-use system	THINKS • Which factors affect HDI the most? • Will the prediction be accurate? • Can I trust the model's results?
Researcher /Student	
DOES • Enters Life Expectancy, Expected Schooling, and GNI values. • Clicks Predict. • Analyzes the predicted HDI result	FEELS • Curious to know the country's development level. • Confident when accurate results are displayed. • Satisfied with a quick and simple prediction system.
